

Transformative Pathways

Identifying leverage points and interventions for triggering transformative changes at consumer, producer and organisational levels.

Background

Biodiversity is declining at unprecedented rates, which will lead to significant consequences at a global scale. There is widespread agreement among science and policy communities that conventional policies will not be enough to halt biodiversity loss or curb climate change. More urgent and ambitious '**transformative changes**' are needed to the ways in which we live, and the ways in which our economies and societies use and relate to nature and natural resources. Transformative change focuses on the fundamental system-wide restructuring of the root causes to sustainability challenges, which are underpinned by complex social paradigms, values and behaviours.

Partners

9 countries and **12** nationalities across Eastern and Western Europe, Africa and Latin America

The consortium of TRANSPATH comprises a mix of leading academics, science-policy experts, and early-career professionals in the global North and South, joining forces to engage with those who affect and are affected by trade regimes and associated 'greening' mechanisms. The project brings together a team representing a diversity of social-cultural origins across Eastern and Western Europe, Africa and Latin America. Nine countries and twelve nationalities are represented.
